

## Distinctive Lighting

BATHROOM AND KITCHEN COLLECTION  
**2020**

# Distinctive Lighting

The Distinctive Lighting collection presents a variety of stylish and inspirational lighting to both illuminate and invigorate your bathroom and kitchen. As part of a larger lighting manufacturing group founded 50 years ago, we have considerable research and design resources to ensure we are able to bring you many stylish options to light your home.

NB: This catalogue shows list price excluding VAT.

## *BATHROOM LIGHTING*

---

This stylish range of products has been specifically designed for use in the bathroom, although they can also be used elsewhere in the home. Offering a choice of both classic and transitional designs, these fittings will add style and elegance to any bathroom setting. All of these products are IP44 rated (the water ingress rating required in many countries for bathroom lighting), making them suitable for Zones 2 and 3. G9 LED lamps are supplied with all fittings listed with G9 lamp holders.

See pages 3-59.

## *KITCHEN LIGHTING*

---

The use of decorative light fittings in the kitchen has become a common choice as part of the overall design. This collection shows our most commonly chosen models used in kitchen spaces, breakfast bars and serving areas, most of which are transitional and vintage based styles. The majority of pendants are height adjustable to maximise versatility using cords, chains or rods.

See pages 60-103.

# BATHROOM LIGHTING

For this modern and sometimes chaotic world we live in, the bathroom has become a place of rejuvenation for the mind, body and soul. Functional and ambient lighting planned into a new bathroom can play a vital part in creating the perfect and relaxing bathing experience.

As the trend moves away from cold and minimalistic bathrooms, lighting is the perfect accessory to help create a warmer and more individual space. Our product designers have taken inspiration from features and trends used on the latest bathroom hardware and accessories to create designs sympathetic with today's style footprint. Many also use LED light sources that look crisp yet burn much less energy, last longer and create far less heat.

In this bathroom lighting collection you will find simplistic beauty as well as opulent statement fittings. Perhaps think of the lighting as part of the design features and whatever your taste, we hope we have the ideal solution for you to enjoy your bathroom more.

Get the look: find out more about this detailed, classic wall light on p51 (code: 22523)

# TIPS FOR CHOOSING BATHROOM LIGHTING

Like many stages of choosing a new bathroom, deciding on the lighting and the choice of fittings is very subjective but we have provided some key points that might help you make your choices.

- 1 GET THE RIGHT AMOUNT OF LIGHT.** Most bathroom use takes place early in the morning and late at night when artificial lighting is very important. Brightness of light is measured in Lumens, which is detailed on most light source packaging. We recommend using 100 Lumens per square metre. So if your bathroom space is 5m x 4m = 20m squared, then 2000 lumens would be an average light level.
- 2 DECIDE WHERE THE LIGHT WILL COME FROM.** The ceiling, the wall or both. Typically a sink and mirror setting requires the most light. You can illuminate this area with wall lights either side, or with an above mirror light. If choosing an above mirror light, ensure its width is no less than 75% and no more than 125% of the mirror for best appearance.
- 3 CONSIDER THE HEIGHT OF YOUR ROOM.** Typically, up to 2.4m high ceilings are safest with flush fittings and anything above 2.4m allows for semi-flush fittings. If the ceiling is 3.0m or greater, flush fittings will become lost, and this is when semi-flush fittings or pendants will work best.
- 4 CONSIDER DESIGN, FINISH AND FORM.** Usually people choose to match light fitting finishes with the sink hardware. Look at the design details of your intended bathroom hardware and see if there are light fitting styles that accent or complement your chosen designs.
- 5 SHARE YOUR CHOICES WITH YOUR BATHROOM PLANNERS / DESIGNERS.** It is important to discuss if you want all lights to operate on one switch or to be split, for example, between ceiling and wall.

# TECHNICAL LIGHTING POINTS

Keeping the jargon to a minimum, bathroom lighting should meet certain technical and safety criteria and perform well when switched on. Here are just some of the important things to be aware of:

- 1 DOUBLE CHECK THE FITTING'S DIMENSIONS,** and make sure it suits your needs. A catalogue image or web page is hard to entirely depict the size of a product.
- 2 MAKE SURE THE FITTING HAS THE RIGHT IP RATING.** The IP (Ingress Protection) rating relates to the level of protection products are built with to protect against the ingress of water. All of our products are IP44 or greater. To know what IP rating you need for certain parts of the bathroom, see page 6.
- 3 QUALITY MANUFACTURED AS STANDARD.** All of our bathroom products are manufactured and tested to UK and European standards, code BS EN60-598-1, which are the safety standards used by all of the lighting industry in Europe and are CE marked to affirm compliance. Always ensure you purchase lights specifically designed for use in the bathroom.
- 4 CHOOSING THE RIGHT LAMP.** All our fittings that feature G9 LED lamps are included in the box. These are 3.5W (40W incandescent equivalent) with a light output of 320 lumens. Most other fittings have E27 lampholders, for which there is a wide choice of LED retrofit lamps in the market. We recommend 8W LED lamps for a good level of brightness.

For additional technical details, dimensions and spare parts please refer to our website.

# BATHROOM LIGHTING SAFETY

When choosing your lights in the bathroom you need to ensure they have the correct IP rating for the zone they are required for. You can see our diagram below for assistance. The zones are:

**ZONE 0** - includes shower cubicles and baths. If the fitting is likely to be submerged in water it will need to be IP67 or greater.

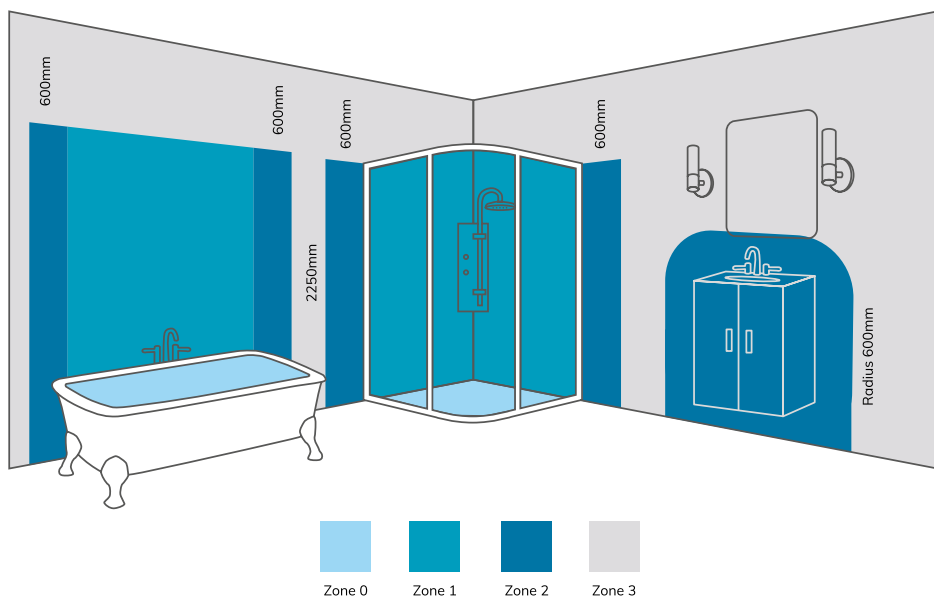

**ZONE 1** - where water jets/shower heads are likely, the model must be IP65 or greater. If the fitting is 240 volts, a 30mA residual current device (RCD) must also be used to protect the circuit in this zone.

**ZONE 2** – is the area 0.6m outside the perimeter of the bath, shower unit and wash basin (to a height of 2.25m from the floor). IP44 rated products must be used in this zone.

**ZONE 3** – is anywhere outside of zones 0, 1 and 2 where no water jet is likely to be used for cleaning purposes. (No IP rating is required for this zone)

## Important Notes

- Ceiling lights (excluding above a shower) are generally expected to be IP44 rated or greater.
- All products in our lighting collection are at least IP44 rated and suitable for Zones 2 and above in the bathroom.
- We recommend you always engage a qualified electrician to install any bathroom fittings as they should be familiar with IEE wiring regulations.

Models shown: 25935 & 25934 (see page 8-9)

- triangular crystal prisms rest in a Polished Chrome frame
- rounded crystals on the bottom reflect inner light
- all supplied with 3.5W LED G9 bulb(s) = 320Lm each, 3000k

## 25934

2lt Wall Light

**H:** 279mm **W:** 165mm **P:** 99mm

**Finish:** Polished Chrome (PC)

**Max. Wattage:** 2 x 3.5W LED G9

**IP Rating:** IP44

25934

£257.50

# KITCHEN LIGHTING

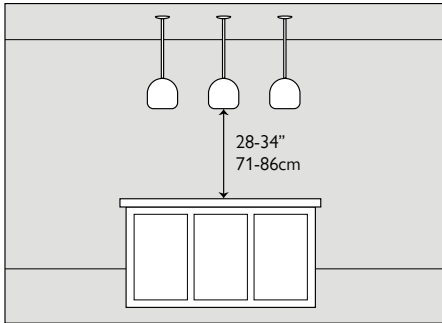

Kitchens are often the hub of the home. They need bright task lighting which is usually achieved through ceiling down lights or under cabinet lighting, but it's decorative lighting that completes the design of a kitchen. The additional style and ambience they bring to a kitchen transforms relaxed and social moments.

Pendants are ideal for over counters, islands and tables. For rooms that have higher ceilings and larger space – consider statement Island lights or chandeliers for bigger impact. For smaller kitchens there are decorative flush and semi-flush ceiling fixtures to bring interest to your ceiling rather than extensive use of downlights.

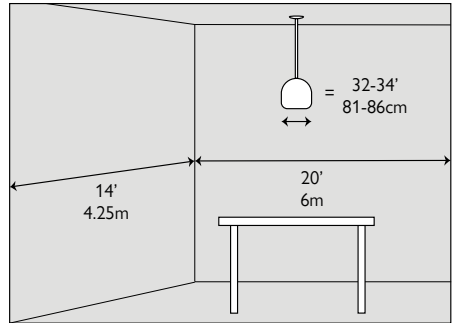

## OUR TOP TIPS

Decorative lighting can be chosen to compliment the architecture and styling of the room. Distinctive Lighting offer a great range of traditional, transitional and more contemporary fixtures. Try to match the finish of the tap or handle hardware used within the kitchen to the lighting fixture metal – but if you are more daring with design then look to choose a statement and contrast piece over the island or counter.

### BEST PRACTICE

A group of pendants is ideal for islands and breakfast bars, hung in pairs or odd numbered groups, depending on size. Keep in mind that the pendants should not prevent those standing around the island from seeing one another. Every space is different so heights will vary, but pendants should typically be hung with the bottom of the fixture 28"-34" (71-86cm) from the countertop.

To size a fixture over a dining table, measure the length and width of the room or dining space in feet and add those figures together. The sum converted to inches will equal the right sized chandelier.

EXAMPLE:  $14' + 20' = 34'$  (aim for a 34"/86cm diameter chandelier/pendant)

The bottom of the chandelier should sit approximately 32"-34" (81-86cm) above the table top.
